

14 Dec 2021

Dear Colleagues,

I am writing to give my *strongest* support for Chanwoo Lee's application to Best Student Paper Award. Chanwoo Lee is currently a fourth-year PhD student in our program. He is the primary author of the submitted paper "Smooth tensor estimation with unknown permutations". He has led every aspect of the work, including study conception, model formulation, theoretical proofs, software development, data applications, and manuscript writing. While I am listed as coauthors, this work is primarily Chanwoo's.

Sincerely,

Miaoyan Wang,
Assistant Professor of Statistics
University of Wisconsin-Madison
